What will I do?

Tuition will be carried out in the field to develop skills in human-wildlife conflict management, disease risk analysis and translocation techniques, disease outbreak investigation and monitoring of the health of declining species. It will include techniques for field monitoring of wildlife (using a range of techniques including animal tracks and signs, dung/pellet identification and quantification, census techniques, camera trapping, and radio telemetry), biological management, visual health monitoring of free-living animals, best practice in wild animal anaesthesia techniques, demonstration and hands-on practice, clinical examination in the field, sampling techniques for infectious disease screening, pathological examination in the field, and scanning disease surveillance scenarios.

Field Course Background

The Zoological Society of London (ZSL), The Wildlife Institute of India (WII) and The University of Edinburgh have been motivated to run this course in recognition of the need to conserve globally important biodiversity in South Asia and other biodiverse areas, which are nevertheless a hotspot for wildlife diseases and conflict. These wildlife diseases are relatively unstudied and unchecked and there is an important need for greater expertise in, and greater numbers of, wildlife health professionals to tackle them. Such wildlife health professionals are needed to undertake interventions in the health, welfare and conservation of wild animals, to investigate emerging infectious diseases and to ensure human well-being.

Therefore, ZSL, WII and the University of Edinburgh, with the support of the Thriplow Trust, have developed a field course to provide training for interventions in wildlife health as an integral component of the MVetSci Conservation Medicine. The course provides veterinarians, particularly from South Asia, with an important practical element when they enrol for the online programme.

Eligibility

In order to be eligible for the course running in 2018, a candidate will need to have enrolled in the Conservation Medicine Programme at the University of Edinburgh by the application deadline of 22nd August 2016. Priority for the Interventions Course in Wild Animal Health will be given to South Asian students. A limited number of places may also be available for veterinarians from South Asia who are not enrolled in the Conservation Medicine programme.

Learning Outcomes

1. To gain a critical awareness of the effects of interventions at the human-wildlife interface.

2. To develop a systematic understanding of the planning of, and field methods in, veterinary medicine and disease outbreak investigation.

3. To gain a comprehensive understanding including new insights into disease risk management in translocation programmes.

4. To gain a critical awareness of field methods to investigate the role of disease in the decline of species.

5. A comprehensive understanding of ex-situ medicine and management in the context of field interventions.
Where, When, Who?

Field Site
The course will be run at Sariska Tiger Reserve in the state of Rajasthan, about 200km from New Delhi. Covering 866km² the reserve supports a plethora of Indian wildlife species and provides opportunities for the in-field teaching of all subjects covered on the course.

When is the course run?
The course runs during the month of February for approximately 2.5 weeks. This includes all your teaching, field visits, travelling in country and opportunities to experience Indian culture.

Tutors
You will be taught by experienced wildlife veterinarians and ecologists from The WII, ZSL and The University of Edinburgh. Guest lecturers from relevant institutes and national parks within India will also contribute to your learning experience. All the course lecturers have recognised research and field experience in their subjects.

Costs
Course fees are as follows; for MVetSci students a total of £1445 and for CPD (Continuing Professional Development) students a total of £2750.

The course fee will cover your accommodation and food for the course duration, travel within India and Park fees.

Flights to India, insurance and visa fees are not included.

How to apply
If you are eligible for the course and wish to apply please contact conservation.medicine@ed.ac.uk.

Alternatively, if you have any questions regarding the course please contact wildlifehealthbridge@ioz.ac.uk

Animals and their habitats face increasing threats across the world. Donate to ZSL to help build a future where animals are valued and their conservation assured.
